

RULES FOR USING AND MAINTAINING SAMURA BAMBOO KNIVES

- We recommend cleaning knives manually or in a dishwasher, using non-abrasive materials, and wiping them dry.
 - Kitchen knives should be used on wooden or plastic cutting boards only (glass boards make any steel blunt).
 - Be careful when cutting products with bones (meat, chicken, etc.). Use the cleaver SBA-0040 for chopping meat and bones. It is not advisable to chop and cut frozen products.
- Store the knives in a special knife block, knife box, knife stand, etc. Make sure that the blades are not in contact with other metal objects.

WHETTING AND SHARPENING SAMURA BAMBOO KNIVES

We recommend sharpening knives with whetstones or ceramic honing rods regularly.

When sharpening, draw the knife along the honing rod with the cutting edge away from you and shift the knife from the handle to the tip.

A whetstone should be completely soaked in water for about 10-15 minutes before each use. Make sure that the whetstone remains slightly wet throughout the sharpening process.

To begin, sharpen one side of the knife until a burr appears.

Then proceed to sharpen the other side of the knife. Continue the process until you attain the desired sharpness. Throughout the process, make sure to maintain the original edge angle of 15-17 degrees which was set at the production factory.

SHARPENING ON A HONING ROD

A ceramic honing rod as a whetstone is a useful tool for long-term use. A honing rod is made of very hard steel or mild steel plated with a diamond or ceramic coating. When sharpening, draw the knife along the honing rod with the cutting edge away from you and shift the knife from the handle to the tip.

SHARPENING ON A WHETSTONE

A whetstone should be completely immersed in water for about 10-15 minutes before each use. Make sure that the whetstone remains slightly wet throughout the sharpening process.

To begin, sharpen one side of the knife until a burr appears. Then proceed to sharpen the other side of the knife. If necessary, repeat the process with a finer stone. Continue the process until you attain the desired sharpness. Throughout the process, make sure to maintain the original edge angle of 15-17 degrees which was set at the production factory.

**NEVER USE YOUR FINGERS TO CHECK THE SHARPNESS OF THE KNIFE!
USE A SHEET OF PAPER TO TEST THE SHARPNESS.**

Take care of your kitchen knives
and enjoy cooking!
